Contents

Part 1 COMPUTER SYSTEMS**1. Basic Theories of Information**

Introduction	2
1.1 Data representation	2
1.1.1 Numeric conversion	2
1.1.2 Numeric representation	11
1.1.3 Operation and precision	22
1.1.4 Non-numeric value representation	23
1.2 Information and logic	25
1.2.1 Proposition logic	25
1.2.2 Logical operation	26
Exercises	29

2. Hardware

Introduction	34
2.1 Information element	34
2.1.1 Integrated circuit	34
2.1.2 Semiconductor memory	35
2.2 Processor architecture	36
2.2.1 Processor structure and operation principles	36
2.2.2 Operation mechanism	48
2.2.3 Processor performance	52
2.3 Memory architecture	53
2.3.1 Memory types	53
2.3.2 Memory capacity and performance	54
2.3.3 Memory configuration	55
2.4 Auxiliary storage devices	56
2.4.1 Types and characteristics of auxiliary storage devices	56
2.4.2 RAID types and characteristics	66
2.5 Input/output architecture and devices	67
2.5.1 Input/output control method	67
2.5.2 Input/output interfaces	69

2.5.3	Types and characteristics of input/output devices	72
2.6	Computer types and architectural characteristics	83
2.6.1	Computer types	83
Exercises		87
3.	Basic Software	
Introduction		92
3.1	Operating system	92
3.1.1	OS configuration and functions	92
3.1.2	Job management	95
3.1.3	Process management	97
3.1.4	Main memory management	100
3.1.5	Virtual storage management	102
3.1.6	File management	104
3.1.7	Security management	108
3.1.8	Failure management	108
3.1.9	Supervisor	109
3.2	Types of OS	109
3.2.1	General-purpose OS	109
3.2.2	Network OS (NOS)	113
3.3	Middleware	113
3.3.1	DBMS	113
3.3.2	Communication management system	114
3.3.3	Software development support tool	114
3.3.4	Operation management tool	114
3.3.5	ORB	115
Exercises		116
4.	Multimedia System	
Introduction		121
4.1	What is multimedia?	121
4.1.1	Multimedia service	121
4.1.2	Platforms that implement the multimedia system	123
4.1.3	Multimedia technology	127
4.2	Multimedia applications	127
4.2.1	Voice and image pattern recognition	127
4.2.2	Synthesis of voice and image	128

4.3 Multimedia application system	129
Exercises	131
5. System Configurations	
5.1 System classification and configurations	133
5.1.1 System classification	133
5.1.2 Client/server system	133
5.1.3 System configurations	136
5.2 System modes	140
5.2.1 System processing mode	140
5.2.2 System usage mode	142
5.2.3 System operating mode	146
5.2.4 Web computing	147
Exercises	148
Answers to Exercises	152

Part 2 INFORMATION PROCESSING AND SECURITY

1. Accounting

1.1 Business Activities and Accounting Information	154
1.1.1 Fiscal Year and Accounting Information	154
1.1.2 The Accounting Structure	157
1.2 How to Read Financial Statements	162
1.2.1 How to Read the Balance Sheet	162
1.2.2 How to Read the Income Statement	169
1.3 Financial Accounting and Management Accounting	176
1.3.1 Financial Accounting	176
1.3.2 Management Accounting	177
1.3.3 Accounting Information System Configuration	184
Exercises	186

2. Application Fields of Computer Systems

2.1 Engineering Applications 192

2.1.1 Automatic Control of Production 192

2.1.2 CAD/CAM/CAE 193

2.1.3 FA Systems and CIM 194

2.2 Business Applications 195

2.2.1 Head Quarters Business Support Systems 195

2.2.2 Retail Business Support Systems 197

2.2.3 Financial Systems 200

2.2.4 Intelligent Transport System 202

2.2.5 Government Administrative Information System 204

2.2.6 Inter-Enterprise Transaction Data Interchange 205

Exercises 208

3. Security

3.1 Information Security 211

3.1.1 What Is Information Security? 211

3.1.2 Physical Security 211

3.1.3 Logical Security 212

3.2 Risk Analysis 213

3.2.1 Risk Management 213

3.2.2 Types, Evaluation, and Analysis of Risks 213

3.2.3 Risk Processing Methods 214

3.2.4 Security Measures 214

3.2.5 Data Protection 214

3.2.6 Protection of Privacy 215

Exercises 217

Answers to Exercises 219

Index 220
